

The Big Bang and Beyond: A Panorama of Modern Cosmology

Presented by **Karl van Bibber**

The story of modern cosmology arguably begins with the problem of the stability of the Universe that vexed Newton until his death, and vexed Einstein himself more than two centuries later. Dramatic

advances in astronomy in the early twentieth century, interpreted in the light of an unsuspected solution to General Relativity prepared the way for a revolution in our understanding of the Universe and its origin. But we were not to recover our equilibrium; encountering the dark sector of the Universe in the second half of the century leaves us finally with the equally unsettling problem about the future of our Universe.

Karl van Bibber is Professor and Chairman, Department of Nuclear Engineering; Executive Director, Nuclear Science and Security Consortium, UC Berkeley.

Tuesday, February 28, 2017, 7:30 pm

DSPT - 2301 Vine Street, Berkeley

This event will be live-streamed. For more info & RSVP to attend:
